

PROJECT DEVELOPMENT PHASE

SPRINT-4

Date	07 November 2022
Team ID	PNT2022TMID26962
Project Name	Natural Disaster Intensity Analysis and Classification using Artificial Intelligence

INTEGRATE THE WEB APP WITH AI MODEL:

After creating the Model, the Model should be integrated with the web app using the Flask application. The coding part is named as app.py and it will be running in the localhost through the generated link. By navigating the local host, the webpage will be visible.

```
73     output = frame.copy()
74     #print("apple")
75     frame = cv2.cvtColor(frame, cv2.COLOR_BGR2RGB)
76     frame = cv2.resize(frame, (64, 64))
77     #frame = frame.astype("float32")
78     x=np.expand_dims(frame, axis=0)
79     result = np.argmax(model.predict(x), axis=-1)
80     index=['Cyclone','Earthquake','Flood','Wildfire']
81     result=str(index[result[0]])
82     #print(result)
83     #result=result.tolist()
84
85     cv2.putText(output, "activity: {}".format(result), (10, 120), cv2.FONT_HERSHEY_PLAIN,
86                 1, (0,255,255), 1)
87     #playaudio("Emergency it is a disaster")
88     cv2.imshow("Output", output)
89     key = cv2.waitKey(1) & 0xFF
90
91     ———# if the `q` key was pressed, break from the loop
92     if key == ord("q"):
93         break
94
95     # release the file pointers
96     print("[INFO] cleaning up...")
97     vs.release()
98     cv2.destroyAllWindows()
99     return render_template("upload.html")
100
101 if __name__ == '__main__':
102     app.run(debug=False, threaded=True)
```

Output

IBM 127.0.0.1:5000/home

127.0.0.1:5000/home

Cyclone

activity: Cyclone

Seasonal winds of varying strength, which can create that creates seismic waves.

Uncontrolled fire in a forest, grassland, brushland

WildFire

10:17 29°C 08-11-2022

The image shows a web browser window displaying a dashboard with three main sections. The top section is titled "Cyclone" and features a satellite image of a cyclone with the text "activity: Cyclone" overlaid. Below this, there is a description: "Seasonal winds of varying strength, which can create that creates seismic waves." The middle section is titled "WildFire" and features a photograph of a large fire with the text "Uncontrolled fire in a forest, grassland, brushland" overlaid. The bottom section is partially visible and shows a photograph of a building. The browser's address bar shows "127.0.0.1:5000/home" and the taskbar at the bottom displays the time as 10:17 and the date as 08-11-2022.

MODEL DEPLOYMENT:

The trained model which is running in the localhost without any error is deployed in the IBM Cloud for making available for the users to predict the Disaster's type and its intensity. It is integrated with the Flask application.
